EMPLOYMENT

Amazon Web Services (AWS), Solutions Architect, Hi-Tech/Electronics/Semiconductor, San Francisco, California | June 2024 - Present
Served as Solutions Architect (SA) for 8 semiconductor and AI silicon customers (including Texas Instruments, Broadcom, and Silicon Labs). Leading end-to-end engagements spanning EDA-on-AWS POCs with LSF/HPC workloads, large-scale public-facing cloud migrations, GPU/Trainium compute architecture, data perimeter design, and AI/ML infrastructure across a technically deep, multi-stakeholder territory.

Retained \$1.1M ARR customer by architecting a GPU/Trainium compute strategy on AWS — conducting workload analysis, coordinating Annapurna Labs technical workshops, and securing Trainium 3 design partner status. Culminated in a SageMaker HyperPod Flexible Training Plans commitment that prevented churn to neo-cloud competitors.

Drove \$1.14M ARR by designing a GraphRAG architecture for Texas Instruments' root cause analysis workflow. Built a domain-specific knowledge graph with GraphRAG over 5,000+ RMA defect manufacturing documents that reduced analysis time from 8–10 weeks to 2 days (95% effort reduction) and published the solution as a reusable asset for the broader AWS SA community.

Authored and open-sourced [AWS Network Firewall CloudFormation templates](#) for [multi-endpoint deployments](#) on aws-samples. Solves a common VPC scaling challenge and produces a production-ready IaC artifact actively adopted by 40+ customers and external partners as of 2026.

Drove \$1.02M in cumulative ARR influence (\$788K launched) across 13 specialist engagements with 10 customers as an active Security Technical Field Community member (focus areas: Infrastructure Security, AI Security), spanning architecture reviews, identity briefings, WAF assessments, and AI security workshops across both primary territory and cross-team engagements.

Amazon Web Services (AWS), Solutions Architect Intern, Santa Clara, California | May 2023 - August 2023

Leveraged AI/ML services to analyze trends/patterns in use case descriptions and validation status.

Automated communication via email to sellers on current status.

Partnered with 25+ Sales Ops, Specialist Sellers, and Specialist SAs to enable sellers to consistently improve quality of opportunity data.

Reduced average validation time from 15 mins to 5 mins per opportunity.

Amazon Lab126, Software Engineer Intern, Sunnyvale, California | May 2022 - August 2022

Built and hosted a full-stack Flask/Python AV (Audio/Video) Sync Analyzer application via NGINX/WSGI on AWS EC2.

Captured and parsed extensive AV sync log data with Python scripting and built Flask web UI to visualize outputted graphs.

Experimented with common AV Sync error variables to ensure correctness of potential root causes.

Automated process for identifying and visualizing log issue root cause and visualizations, reducing error analysis time by 75%.

Directly serves 30+ members across multimedia and SDE teams in Amazon Devices in addition to external teams using FireTVs for AV Sync error analysis.

Amazon Lab126, Software Quality Engineer Intern, Sunnyvale, California | May 2021 - August 2021

Delivered a project using ELK (Elasticsearch, Logstash, Kibana) stack and Python scripts to visualize Jira logs with Kibana dashboards to the Devices (Fire OS Multimedia 3P QA) team.

Configured static IP for Kibana dashboards to ensure easy internal network access and efficient error visualization, reducing analysis time by 50%.

25+ software development and multimedia QA team members use these Kibana dashboards on a daily basis for Jira multimedia error visualizations.

Cinequest, Software Engineer Intern, San Jose, California | February 2020 - May 2020

HealthLevel, Software Engineer Intern, Mountain View, California | June 2019 - August 2019

EDUCATION

BS, Computer Science & Advertising (University of Illinois at Urbana-Champaign) | GPA: 3.8/4.0 | August 2020 - May 2024

Coursework → Programming Language & Compilers, Computational Advertising, Social & Information Networks, Algorithms

& Models of Computation, Data Structures, Computer Systems, Digital Advertising, Introductory Matrix Theory, Software Design Studio, Discrete Structures

High School Summer College (Stanford University) June 2018 - Aug. 2018

Programming Methodologies (CS 106A), Client-Side Internet Technologies (CS 193C)

SKILLS

TECHNICAL: *AWS (3 yrs), Artificial Intelligence/Machine Learning (2 yrs), Java (6 yrs), Python (6 yrs), HTML/CSS/JS (5 yrs), GitHub/GitLab (3 yrs), XML (2 yrs), PHP (1 yr), jQuery (1 yr), Flask (1 yr), C++ (1 yr), Jira (1 yr), Scrum (1 yr), Linux (1 yr), C# (less than 1 yr), MySQL (less than 1 yr), Android Studio (less than 1 yr), ELK stack (less than 1 yr)*

INTERPERSONAL: *Customer Obsession, Leadership, Outreach, Communication*

VOLUNTEERING

Asians at Amazon SF / Bay Area (Amazon), VP Business Operations | 2024 - Present

Led end-to-end planning of 1,000+ attendee cultural events across 6+ Bay Area offices, coordinating vendors, facilities, and cross-affinity partnerships. Earned an executive shoutout in 2026 from an L10 VP for community impact and Asian representation.

Association of Computing Machinery (ACM), Mentorship Chair (2023-2024) and SIGCloud President | 2021-2022

Headed the mentorship program for 100+ mentors and mentees, paired upperclassmen with current freshmen in CS.

Hosted biweekly technical workshops, socials, and collaborations with other computer science campus organizations to educate students and promote a sense of community within ACM.

Hosted an 8-session series for 100+ attendees for SIG (Special Interest Group) about AWS Cloud at the University of Illinois + career development session with AWS guest speakers.
